

Save World Bays & Oceans

At MuchoCoco we care and appreciate the environmental protection and measurements, to SAVE the Ocean Water including the coral reefs, sea life and beaches. From contaminants produced from the usage of suntan lotions which are related to the tremendous human print left after world tourism impact in oceans and beach resorts around the globe.

Be aware of the synthetic chemicals into the products you use on your body and the direct relation to the bleaching of corals. Convert by using natural sun-protection and sun-filter products. This way we slow the high cause of the mortality of sea life and bring renewal to the Oceans and Bays.

Oxybenzone is present in most commercial solar protection products, as more than 7,000 brands contain this ingredient. 26,000 tons end up in the ocean water all over by suntan creams and lotions. Many nowadays, sun products went to include in their formulation the use of Nanotechnologies and in the form of Titanium and Zinc which are heavy and go to the bottom and reach the coral reefs anyway.

One drop of Oxybenzone contaminates the water of six and a half Olympic pools and kills marine life and absorbs into human skin, causes irritation and internal cell in organ-disruption.

Buy products that are all natural only, human and ocean friendly, short-span biodegradable, and vegan. No colorants, perfumes, or alcohols.

Produced by MuchoCoco www.MuchoCoco.com

MuchoCoco gives the sales percentage to SAVE sea turtles in the Banderas Bay, Jalisco, Nayarit in Mexico. Precursor of the first ocean impact study in Banderas Bay of suntan lotions and their relation to oxybenzone in the world coral bleaching.
